

Series 10-ARP20 to 10-ARP40 Direct Operated Precision Regulator

Series 10-ARP20K to 10-ARP40K Direct Operated Precision Regulator with Backflow Function

- Clean room compliant (10-ARP).
- Clean room compliant, copper-free, fluorine-free, silicone-free (21-ARP).
- With the backflow function it incorporates a mechanism to exhaust the air pressure in the outlet side reliably and quickly.

Note 1) Options B, G, H are shipped together, (but not assembled).
 Note 2) Set nut is included for bracket.
 Note 3) When choosing with H (panel mount), the installation space for lead wires will not be secured. In this case, select "wiring top entry" for the lead wire entry. (Select "wiring bottom entry" when the semi-standard Y is chosen simultaneously.)
 Note 4) The only difference from the standard specifications is the pressure regulator spring.
 It does not restrict the setting of 0.2 MPa/0.6 MPa or more.
 When the pressure gauge is attached, a 0.2 MPa pressure gauge for 0.2 MPa setting will be fitted, and a 0.7 MPa pressure gauge for 0.6 MPa setting will be fitted.

Note 5) For thread type: NPT. This product is for overseas use only according to the new Measurement Law. (The SI unit type is provided for use in Japan.) The digital pressure switch will be equipped with the unit conversion function, setting to psi initially.
 Note 6) For options: E1, E2, E3, E4. This product is for overseas use only according to the new Measurement Law. (The SI unit is provided for use in Japan.)
 Note 7) ○ : For thread type, NPT only.
 Note 8) △ : Combination available for options : E1, E2, E3, E4.

Specific Product Precautions 1

Be sure to read this before handling. Refer to page 1382 for Safety Instructions.

Design

⚠ Warning

1. Be sure to install a safety device to prevent damage or malfunction of the outlet side components when the output pressure exceeds the set pressure value.
2. Please consult with SMC if the intended application calls for absolutely zero leakage due to special atmospheric requirements, or if the use of a fluid other than air is required.

⚠ Caution

1. Select a model that is suitable for the desired cleanliness by referring to the SMC's Best Pneumatics catalog.
2. Components cannot be used for applications that are outside the range of specifications.
Please consult with SMC when you anticipate using the component outside the range of its specifications (such as temperature and pressure).
3. Even when the product is used in the specified range, it may chatter depending on the operating conditions. Please contact SMC for the details of this chattering.

Selection

⚠ Warning

1. The mineral grease used on internal sliding parts and seals may run down to outlet side components.
Please consult with SMC if this is not desirable.
2. Residual pressure release (outlet pressure release) is not complete by releasing the inlet pressure.
To release residual pressure, select a model with a backflow function. Using a model without a backflow function makes for inconsistent residual pressure release (i.e., residual pressure may or may not be released) depending upon the operating conditions.
3. Please contact SMC if air will not be consumed in the system for a long period of time, or if the outlet side will be used with a sealed circuit and a balanced circuit, as this may cause the set pressure of the outlet side to fluctuate.
4. Set the regulating pressure range for the outlet pressure of the regulator in a range that is 90% or less of the inlet pressure.
If set to above 90%, the outlet pressure will be easily affected by fluctuations in the flow rate and inlet pressure, and become unstable.
5. A safety margin is calculated into the maximum regulating pressure range appearing in the catalog's specification table.
However, the outlet pressure may exceed the set pressure due to a delay in the valve's closing.
6. Please contact SMC when a circuit requires the use of a regulator having relief sensitivity with high precision and setting accuracy.

Mounting

⚠ Caution

1. To avoid reversed connections of the air inlet/outlet, make connections after confirming the "IN/OUT" mark or arrows that indicate the direction of air flow. Reversed connections can cause malfunction.
2. Leave a space of 100 mm or more for maintenance on the valve guide side (opposite side from the knob).
3. When the product is installed between a solenoid valve and an actuator, select a backflow function type.

Adjustment

⚠ Warning

1. Set the regulator while verifying the displayed values of the inlet and outlet pressure gauges.
Turning the knob excessively can cause damage to the internal parts.
2. Do not use a tool on the pressure regulator knob as this can cause damage. It must be operated manually.

⚠ Caution

1. Be sure to check the inlet pressure before setting the outlet pressure.
2. Be sure to unlock the knob before adjusting the pressure and lock it after setting the pressure.

Failure to follow this procedure can cause damage to the knob and the outlet pressure may fluctuate.

- Pull the pressure regulator knob to unlock. (You can visually verify this with the "orange mark" that appears in the gap.)
- Push the pressure regulator knob to lock. When the knob is not easily locked, turn it left and right a little and then push it (when the knob is locked, the "orange mark", i.e., the gap will disappear).

3. To set the pressure using the knob, turn the knob in the direction that increases pressure and lock the knob after the pressure is set.

If this is done in the direction that decreases pressure, the pressure may drop from the original set pressure. Turning the knob clockwise increases the outlet pressure, and turning it counterclockwise reduces the pressure.

4. Do not apply pressure exceeding the range of specifications.

It can damage the pressure gauge.

Series ¹⁰/₂₁ ARP20/30/40
 Series ¹⁰/₂₁ ARP20K/30K/40K
Specific Product Precautions 2

Be sure to read this before handling. Refer to page 1382 for Safety Instructions.

Adjustment

⚠ Caution

5. The product consumes a small amount of fluid from the bleed port.

The product is designed to have a bleed mechanism for highly accurate pressure adjustment, and consumes a small amount of fluid from the bleed port. This should not be considered abnormal.

Air Supply

⚠ Warning

1. Use a mist separator on the inlet side of the product.
 If the supplied air contains condensate or dust, the bleed mechanism can malfunction.
2. Do not use a lubricator on the inlet side of the product, as the bleed mechanism can malfunction.

Piping

⚠ Warning

1. To screw piping materials into components, tighten with a recommended tightening torque while holding the female thread side.

If the minimum tightening torque is not observed, this can cause a looseness and seal failure. On the other hand, excess tightening torque can cause damage to the threads. Furthermore, tightening without holding the female thread side can cause damage due to the excess force that is applied directly to the piping bracket.

Recommended Tightening Torque [N·m]

Connection thread	1/8	1/4	3/8	1/2
Torque	7 to 9	12 to 14	22 to 24	28 to 30

2. Avoid excessive torsional moment or bending moment other than those caused by the equipment's own weight as this can cause damage. Support external piping separately.
3. Piping materials without flexibility such as steel tube piping are prone to be affected by excess moment load and vibration from the piping side. Use flexible tubing in between to avoid such an effect.

Maintenance

⚠ Warning

1. When disassembly or installation is required during the maintenance, repair, or replacement of a device, be sure to follow the instructions provided in the operation manual or safety instructions in this catalog.
2. When using the regulator with backflow function between a solenoid valve and an actuator, check the pressure gauge periodically.

Sudden pressure fluctuations may shorten the durability of the pressure gauge. A digital pressure gauge is recommended for such situation or as deemed necessary.

⚠ Caution

1. For emergency action in the event of setting failure or leakage from the relief port, refer to "Troubleshooting" in the Operation Manual of the product.
