

NAAMS Standards Compliant Power Clamp Cylinder

CKZ2N Series

RoHS

ø50, ø63, ø80

High clamping force

Clamping force: **8800 N**

(ø80, Arm length: 100 mm, 0.5 MPa pressure)

Uses a toggle mechanism for force amplification and toggle locking

Can hold a clamped state when supply pressure drops or residual pressure is released

Spatter-proof construction

Fully closed structure prevents the intrusion of weld spatter

Equipped with a magnetic field resistant proximity switch for use in welding environments

NAAMS Standards Compliant Power Clamp Cylinder

CKZ2N Series

ø50, ø63, ø80

RoHS

How to Order

Base type

CKZ2N 63 TF - 120 R T

NAAMS Standards compliant
power clamp cylinder

Bore size

50	50 mm equivalent
63	63 mm equivalent
80	80 mm equivalent

Cylinder port

Nil	NPT
TF	G

Arm opening angle

30	30°
45	45°
60	60°
75	75°
90	90°
105	105°
120	120°
135	135°

Proximity switch

T	TURCK
P	P&F

Clamp arm position

R	L	D
Right	Left	Both sides

* Proximity switch mounting
surface viewed from the front

Clamp arm

CKZ - 63 A002

Bore size

50	50 mm equivalent
63	63 mm equivalent
80	80 mm equivalent

Clamp arm code

(Refer to pages 119 to 127.)

Cylinder Specifications

Bore size [mm]	50	63	80
Action	Double acting		
Fluid	Air		
Proof pressure	1.2 MPa		
Max. operating pressure	0.8 MPa		
Min. operating pressure	0.3 MPa		
Ambient and fluid temperatures	-10 to 60°C		
Cushion	Clamping side: None Unclamping side: Rubber bumper		
Operating time	Clamping: 1 sec. or more, Unclamping: 1 sec. or more		
Max. allowable holding moment*1	800 N·m	1500 N·m	2500 N·m

*1 Refers to the maximum holding force (torque) while clamped with the operating air exhausted
This is not the possible holding force (torque) for normal use.

Weight (Cylinder Without Arm)

Bore size [mm]	Arm position	Arm opening angle							
		30°	45°	60°	75°	90°	105°	120°	135°

Proximity Switch Specifications

Manufacturer	TURCK	P&F
Power supply voltage	10 to 30 VDC	10 to 30 VDC
Output	N.O., PNP	N.O., PNP
Continuous load current	150 mA	100 mA
Response frequency	30 Hz	25 Hz
Housing material	PBT	PA6, PBT
Output indication	Clamping side: Red Unclamping side: Yellow	Clamping side: Red Unclamping side: Yellow
Power supply indication	Green	Green
Connector	M12 connector	M12 connector

* Switch specifications correspond to the manufacturers' technical information.

Wiring Diagram (PNP Connection Circuit)

* Applicable to both TURCK and P&F
* NPN specifications are made to order

CKZ2N Series Model Selection

Relation between arm length and clamping force

Allowable arm length

Allowable arm length

Bore size	Allowable arm length [mm]
50	300
63	300
80	400

Allowable load mass

The allowable load mass changes depending on the arm opening angle.
Be sure to use the product within the allowable values shown in the graphs below.
* The load indicates the total weight of the clamp arm and clamping block.
* When the operating time is 1 second

Calculation procedure for allowable load mass

1. Calculate the distance L from the fulcrum to the load center of gravity.
2. Check the arm opening angle of the product.
3. Read the allowable load mass from the graph.

Bore Size: 50

Bore Size: 63

CKZ2N Series Setup Procedure

Precautions

- 1) The tightening torque of the clamp arm is 12 to 15 N·m for $\phi 50$, 15 to 20 N·m for $\phi 63$, and 18 to 24 N·m for $\phi 80$. Refer to pages 120 to 127 for details on the clamp arm.
- 2) This product is designed to be used after being externally adjusted using a shim, and there is a mechanical difference of 0 to $+0.5^\circ$ at the clamping end as shown in Figure 1.
- 3) Be sure to use a speed controller, and make adjustments according to the following conditions.

Unclamping to clamping: 1 second or more

Clamping to unclamping: 1 second or more

If excessive kinetic energy is applied, there is a possibility of damage.

- 4) When using a side guide: Attach the side guide so that lateral loads, such as galling, etc., are not applied to the clamp arm.

Figure 1

Power clamp cylinder mounting and setup procedure

<Ex. 1 When using clamping force only: When equipped with a workpiece receptacle>

■ Procedure

- A) Place the workpiece, supply air to the clamping port without attaching the block on the arm side, and operate the clamp arm to the end of the clamp.
- B) In the state of A), attach the arm side block, and adjust the shim so that there is a space of about 0 mm between the arm side block and the workpiece.
During this step, theoretically, there is no clamping force pressing down on the workpiece.
- C) In order to generate a clamping force from the state described in step B), insert an additional shim.
The thickness of the shim changes depending on the arm length and the operating pressure. Refer to page 131.
Please note that the graph should only be used as a guide as there is a tolerance of about 10% in the clamp cylinder body.
- D) Exhaust the air while in the clamped state, and confirm that the clamp arm does not open.

Power clamp cylinder mounting and setup procedure

<Ex. 2 When using a hard stop: When not equipped with a workpiece receptacle>

Procedure

- A) Supply air to the clamping port without installing the upper hard stop, and operate the clamp arm to the end of the clamp.
- B) In the state of A), attach the upper hard stop and adjust shim ① so that there is a space of about 0 mm between the upper hard stop and the hard stop.
During this step, theoretically, there is no clamping force applied to the hard stop.
- C) In order to generate a clamping force from the state described in step B), insert an additional shim ①.
The thickness of the shim changes depending on the distance to the hard stop and the operating pressure. Refer to page 131, and consider the distance to the hard stop as the arm length.
Please note that the graph should only be used as a guide as there is a tolerance of about 10% in the clamp cylinder body.
- D) In the state of C), adjust shim ② so that the arm side block contacts the workpiece.
- E) Exhaust the air while in the clamped state, and confirm that the clamp arm does not open.

Relation between shim thickness and clamping force

- * Use this figure as a guide as there is a tolerance of about 10% in the clamp cylinder body.
- * When a shim exceeding the peak clamping force position on the graph is inserted, the lock will not be activated when clamped. Insert a shim of the appropriate thickness.

*1 The arm length indicates the distance between the clamp arm shaft and the clamping position.

To change the arm opening angle

⚠ Caution Be sure to confirm safety, and perform the work while the air is exhausted.

Procedure for changing the arm opening angle

- 1) When changing the arm opening angle, be sure to confirm that the air inside the cylinder has been exhausted.
- 2) Remove the switch cassette.
 - * 8 types of arm opening angles (unclamping angles) 30°, 45°, 60°, 75°, 90°, 105°, 120°, and 135° are available for each standard size.

- 3) Remove the dog of the A part, and mount a different dog for other angles using the tightening torque below. (Confirm the direction of the angle display.) Then mount the switch cassette using the tightening torque below.

Description	Bore size [mm]	Tightening torque
		N·m
Dog	50	3.0 to 4.0
	63	3.0 to 4.0
	80	3.0 to 4.0
Switch cassette	50	5.0 to 7.0
	63	5.0 to 7.0
	80	5.0 to 7.0

- 4) Remove the stopper bolt of the head cover, and mount a different stopper bolt for other angles using the tightening torque below. (Confirm the angle display.)

Description	Bore size [mm]	Tightening torque
		N·m
Stopper bolt	50	45 to 65
	63	85 to 115
	80	130 to 190

Top cover replacement

⚠ Caution Be sure to confirm safety, and perform the work while the air is exhausted.

- 1) Mount the top cover to the clamp cylinder, then tighten it to the specified tightening torque below.
 - * Refer to "Replacement Parts" (page 117) for the part numbers of the top cover replacement parts.

Description	Bore size [mm]	Tightening torque
		N·m
Top cover kit	50	2.5 to 3.0
	63	2.5 to 3.0
	80	3.0 to 5.0

CKZ2N Series Specific Product Precautions

Be sure to read this before handling the products. Refer to page 179 for safety instructions. For actuator precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <https://www.smcworld.com>

⚠ Caution

1. Manual lock release

Be sure to confirm safety before manually releasing the lock, and only perform work while the air is exhausted. Otherwise, the clamp arm may operate unexpectedly.

- In the case of a rubber cover, the lock can be released easily by hitting the round tab on the cover with a plastic hammer.

Rubber cover type

- Provide enough space to perform a manual lock release.

Rubber cover type

2. Do not disassemble the power clamp cylinder.

The power clamp cylinder consists of a completely sealed structure in order to protect it from welding spatter. Do not disassemble, except for when replacing any of the replaceable parts, as this may cause the performance to deteriorate.

3. Clamp arm

The clamp arm may interfere with the cylinder body depending on the mounting method. Be sure to check for interference.

4. Proximity switch output

The switch output signal is output near the clamping end and the unclamping end respectively.

The switch output signal on the clamping side does not output the status where the power clamp cylinder is locked by the toggle mechanism.

5. Operating time and allowable load mass

Fast operation (short stroke times) or excessive loads will lead to the breakage or deformation of the product. It is recommended to install shock absorbers to reduce impact force in these instances.
