

# Air Cylinder

## CG1 Series

ø20, ø25, ø32, ø40, ø50, ø63, ø80, ø100

RoHS

Female rod end available as standard

Rod end types suitable for the application can be selected.

Easy fine adjustment of auto switch position

Fine adjustment of the auto switch position is possible by simply loosening the screw attached to the auto switch.

Transparent switch bracket improves visibility of indicator LED.

No trunnion mounting female thread added to basic type variation

No foreign matter accumulation due to the simple construction

## Part numbers with rod end bracket and/or pivot bracket available

Not necessary to order a bracket for the applicable cylinder separately

(Note) Mounting bracket is shipped together with the product, but not assembled.

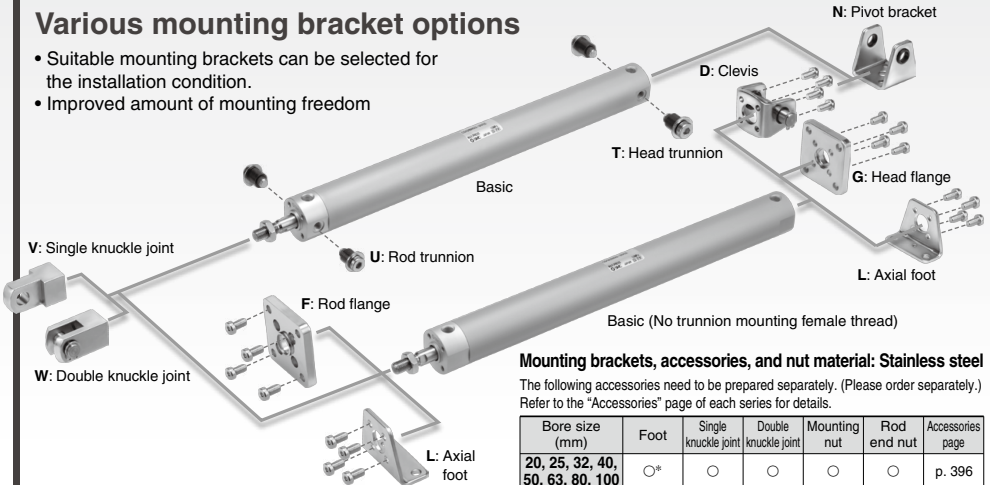

Example) CDG1 **D** N20-50Z- **N W** -M9BW  
 • Mounting

Pivot bracket		N: Kit of pivot bracket and clevis	Kit of pivot bracket and trunnion	Rod end bracket		With rod end bracket	
Nil	None			Nil	None	V: Single knuckle joint	W: Double knuckle joint
N	Pivot bracket is shipped together with the product, but not assembled.			V	Single knuckle joint		
				W	Double knuckle joint		

\* Applicable to only mounting D, U and T.

## Various mounting bracket options

- Suitable mounting brackets can be selected for the installation condition.
- Improved amount of mounting freedom

**Mounting brackets, accessories, and nut material: Stainless steel**

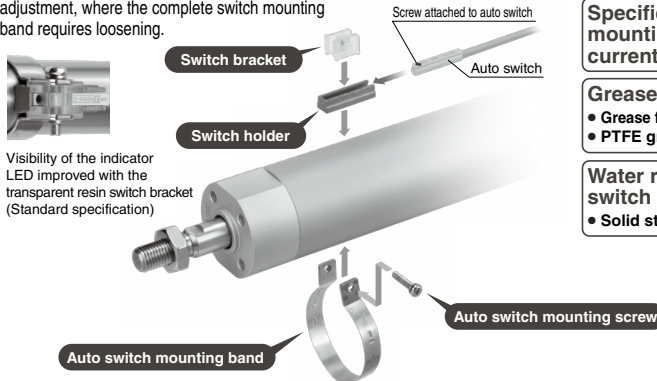

The following accessories need to be prepared separately. (Please order separately.) Refer to the "Accessories" page of each series for details.

Bore size (mm)	Foot	Single knuckle joint	Double knuckle joint	Mounting nut	Rod end nut	Accessories page
20, 25, 32, 40, 50, 63, 80, 100	○*	○	○	○	○	p. 396

\* Except bore size 20 and 25.

## Easy fine adjustment of auto switch position

Fine adjustment of the auto switch set position can be performed by loosening the auto switch attached screw without loosening the auto switch mounting band. Operability improved compared with the current auto switch set position adjustment, where the complete switch mounting band requires loosening.

Visibility of the indicator LED improved with the transparent resin switch bracket (Standard specification)

## No environmental hazardous substances used

Compliant with EU RoHS directive.  
Lead free bushing is used as sliding material.

Specifications, performance and mounting method are same as the current product.

Grease is selectable. (Option)

- Grease for food processing equipment (XC85)
- PTFE grease (X446)

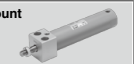

Water resistant compact auto switch now available

- Solid state auto switch D-M9□A(V)

## Environmentally Resistant Specifications

### Water Resistant ■ Corrosion Resistant

Stainless steel cylinder (CG5 Series) ..... p. 1117

### Water Resistant

The use of a special scraper allows for improved water resistance.

Water-resistant cylinder (CG1□R/V) ..... p. 1192

### Corrosion Resistant

Fluororubber seal (-XC22) ..... p. 1508

### Dust Resistant

Durability is 4 times stronger than the standard model.

Compact cylinder with stable lubrication function (Lube-retainer) (CG1□M) ..... p. 1201

Prevents dust, etc., adhered to the rod from entering the internal parts

With heavy duty scraper (-XC4) ..... p. 1459

### Spatter Resistant

With coil scraper (-XC35) ..... p. 1520

### Temperature Measures

Heat resistant/Cold resistant cylinder (-XB6, -XB7) ..... p. 1428, 1430

Refer to "Operating Environment" in the Actuator Precautions.

## Applications Requiring Lateral Load Resistance

For use in applications in which a lateral load exceeding the allowable value is to be applied, consider using a guide cylinder.

## Standard Strokes

Bore size	Standard stroke (Notes1)	Manufacturable stroke (mm)
20	25, 50, 75, 100, 125, 150, 200	1 to 1500
25		
32		
40	25, 50, 75, 100, 125,	1 to 1500
50, 63	150, 200, 250, 300	
80		
100		

Note 1) Intermediate strokes not listed above are produced upon receipt of order. Manufacture of intermediate strokes at 1 mm intervals is possible. (Spacers are not used.)

Note 2) Applicable strokes should be confirmed according to the usage. For details, refer to "Air Cylinders Model Selection" on pages 8 to 19. In addition, the products that exceed the standard stroke might not be able to fulfill the specifications due to the deflection etc.

## Ordering Example of Cylinder Assembly

Cylinder model: **CDG1DN20-100Z-NW-M9BW**

Mounting	D: Clevis
Pivot bracket	N: Yes
Rod end bracket	W: Double knuckle joint
Auto switch D-M9BW:	2 pcs.

\*Pivot bracket, double knuckle joint and auto switch are shipped together with the product, but not assembled.

## Rod Boot Material

Symbol	Rod boot material	Maximum operating temperature
<b>J</b>	Nylon tarpaulin	70°C
<b>K</b>	Heat resistant tarpaulin	110°C*

\* Maximum ambient temperature for the rod boot itself.

**Mounting type**  
**Nil** Without magnet  
**D** Built-in magnet

**Air-hydro**

Low pressure hydraulic cylinder of 1.0 MPa or less  
 When using together with the CC series air-hydro unit, constant and low speed actuation and intermediate stopping similar to hydraulic units are possible with the use of valves and other pneumatic equipment.

**Dimensions** (Dimensions other than those shown below are the same as the standard type.)

## Specifications

Bore size (mm)	20, 25, 32, 40, 50, 63
<b>Action</b>	Double acting
<b>Fluid</b>	Turbine oil
<b>Proof pressure</b>	1.5 MPa
<b>Maximum operating pressure</b>	1.0 MPa
<b>Minimum operating pressure</b>	0.18 MPa
<b>Piston speed</b>	15 to 300 mm/s
<b>Cushion</b>	Rubber bumper (Standard equipment)
<b>Ambient and fluid temperature</b>	5 to 60°C
<b>Mounting</b>	Basic, Axial foot, Rod flange, Head flange, Rod trunnion, Head trunnion, Clevis
<b>Made to Order</b>	Change of rod end shape

\* Auto switch can be mounted.

## Water Resistant

CDG1 **Mounting type** **Type** **Bore size** **Port thread type** **R** - **Stroke** **Rod end thread** **Z** - **Pivot bracket** **Rod end bracket** - **Auto switch** - **Made to Order -XC6**

**D** Built-in magnet

**Water resistant cylinder**  
**R** NBR seals (Nitrile rubber)  
**V** FKM seals (Fluororubber)

**Water resistant 2-color indicator, solid state auto switch**  
**M9(A)(V)** ø32 to ø63  
**G5BAL** ø80, ø100

## Caution

Since the scraper is press-fit into the rod cover, it cannot be replaced.

Applicable for use in an environment with water splashing such as food processing and car wash equipment, etc.

## Specifications

<b>Both K</b>	Heat resistant tarpaulin
<b>Both JJ</b>	Nylon tarpaulin
<b>Sides KK</b>	Heat resistant tarpaulin

**Rod end thread**

<b>Nil</b>	Male rod end
<b>F</b>	Female rod end

**Cylinder stroke (mm)**  
Refer to "Standard Strokes" on page 399.

**Number of auto switches**

<b>Nil</b>	2 pcs.
<b>S</b>	1 pc.
<b>n</b>	"n" pcs.

Note) In the case of w/rod boot, and a foot bracket or rod flange as a bracket, those parts are to be assembled at the time of shipment.  
\* For female rod end, no rod boot is provided.

**Made to Order**  
For details, refer to page 399.

### How to Order

- \* Mounting bracket is shipped together with the product, but not assembled.
- \* The cylinder for F, G, L, D mounting types is Z: Basic (without trunnion mounting female thread).

### Built-in Magnet Cylinder Model

If a built-in magnet cylinder without an auto switch is required, there is no need to enter the symbol for the auto switch.  
(Example) CDG1FN32-100TZ

- \* No bracket is provided for the female rod end.
- \* Rod end bracket is shipped together with the product, but not assembled.
- \* A knuckle joint pin is not provided with the single knuckle joint.

**Made to Order**  
For details, refer to page 407.

\* Refer to "Ordering Example of Cylinder Assembly" on page 408.

### Applicable Auto Switches/Refer to pages 1271 to 1365 for further information on auto switches.

\* Solid state auto switches marked with "○" are produced upon receipt of order.

\* Since there are other applicable auto switches than listed above, refer to page 446 for details.

\* For details about auto switches with pre-wired connector, refer to pages 1340 and 1341.

\* The D-A9□□/M9□□ auto switches are shipped together, (but not assembled). (However, only the auto switch mounting brackets are assembled before shipment.)

## How to Order

**Type**

N	Rubber bumper
A	Air cushion (ø40 to ø63 only)

**Cylinder stroke (mm)**  
Refer to "Standard Strokes" on page 414.

**Pivot bracket**

Nil	None
N	Pivot bracket is shipped together with the product.

\* Only for D, U, T mounting types  
\* Pivot bracket is shipped together with the product, but not assembled.

**CG1K B N 25 - 100 Z - - -**

**With auto switch** **CDG1K B N 25 - 100 Z - - - M9BW - - -**

**With auto switch (Built-in magnet)**  
**Double acting, Non-rotating rod type**

**Mounting**

B	Basic	G	Head flange
Z*	Basic (without trunnion mounting female thread)	U	Rod trunnion
L	Axial foot	T	Head trunnion
F	Rod flange	D	Clevis

**Bore size**

20	20 mm
25	25 mm
32	32 mm
40	40 mm
50	50 mm
63	63 mm

**Rod end bracket**

Nil	None
V	Single knuckle joint
W	Double knuckle joint

\* No bracket is provided for the female rod end.  
\* Rod end bracket is shipped together with the product, but not assembled.  
\* A knuckle joint pin is not provided with the single knuckle joint.

**Number of auto switches**

Nil	2 pcs.
s	1 pc.
n	"n" pcs.

**Auto switch**

Nil	Without auto switch
-----	---------------------

\* For applicable auto switches, refer to the table below.

**Rod end thread**

Nil	Male rod end
F	Female rod end

**Made to Order**  
For details, refer to page 414.

Note) Mounting bracket is shipped together with the product, but not assembled.  
\* The cylinder for F, G, L, D mounting types is Z: Basic (without trunnion mounting female thread).

### Built-in Magnet Cylinder Model

If a built-in magnet cylinder without an auto switch is required, there is no need to enter the symbol for the auto switch.

(Example) CDG1KFA32-100Z

\* Refer to "Ordering Example of Cylinder Assembly" on page 414.

### Applicable Auto Switches/Refer to pages 1271 to 1365 for further information on auto switches.

\* Since there are other applicable auto switches than listed above, refer to page 446 for details.

\* For details about auto switches with pre-wired connector, refer to pages 1340 and 1341.

\* The D-A90□/M9□□ auto switches are shipped together, (but not assembled). (However, only the auto switch mounting brackets are assembled before shipment.)

**The CG1R direct mount cylinder can be installed directly through the use of a square rod cover.**

### Space-saving has been realized.

Because it is a directly mounted type without using brackets, its overall length is shorter, and its installation pitch can be made smaller. Thus, the space that is required for installation has been dramatically reduced.

## How to Order

### Built-in Magnet Cylinder Model

If a built-in magnet cylinder without an auto switch is required, there is no need to enter the symbol for the auto switch. (Example) CDG1KRN32-100Z

### Applicable Auto Switches

Refer to pages 1271 to 1365 for further information on auto switches.

\*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.  
 \*2 1 m type lead wire is only applicable to D-A93.

\* Lead wire length symbols: 0.5 m ..... Nil (Example) M9NV  
 1 m ..... M (Example) M9NVV  
 3 m ..... L (Example) M9NVL  
 5 m ..... Z (Example) M9NVZ  
 None ..... N (Example) H7CN

\* Solid state auto switches marked with "○" are produced upon receipt of order.

\* Since there are other applicable auto switches than listed above, refer to page 446 for details.  
 \* For details about auto switches with pre-wired connector, refer to pages 1340 and 1341.  
 \* The D-A93□□/M9□□□□ auto switches are shipped together, (but not assembled). (However, only auto switch mounting brackets are assembled before shipment.)

# CG1KR Series

**CG1KR series direct mount, non-rotating rod type cylinder can be installed directly through the use of a square rod cover.**

## Space-saving has been realized.

Because it is a directly mounted type without using brackets, its overall length is shorter, and its installation pitch can be made smaller. Thus, the space that is required for installation has been dramatically reduced.

Note 1) As the switch bracket is made of polyamide, its performance may be affected by chemicals such as alcohol, chloroform, methylamines, hydrochloric acid, and sulfuric acid, so it cannot be used in environments where these chemicals come into contact with the product.

Note 2) When mounting a D-M9□A(V) type auto switch, if the switch bracket is mounted on the indicator light, it may damage the auto switch. Therefore, be sure to avoid mounting the switch bracket on the indicator light.

	D-B53		—	ø20 to ø100	

\* With pre-wired connector is also available for solid state auto switches. For details, refer to pages 1340 and 1341.

\* Normally closed (NC = b contact) solid state auto switches (D-M9□E(V)) are also available. For details, refer to page 1290.

## 1 PTFE Grease

Symbol

**-X446**

Applicable to environments incompatible with mineral oil  
PTFE grease (fluorine grease) is used as the lubricating grease.

### Applicable Series

Description	Model	Action	Note
Standard type	CG1	Double acting, Single rod	Except with air cushion

### How to Order

Standard model no.

## Specific Product Precautions 1

Be sure to read this before handling the products. Refer to page 20 for safety instructions and pages 21 to 30 for actuator and auto switch precautions.

### <Precautions on each series>

#### Handling

##### ⚠ Warning

1. Do not operate the cushion valve in the fully closed or fully opened state.

Using it in the fully closed state will cause the cushion seal to be damaged. Using it in the fully opened state will cause the piston rod assembly or the cover to be damaged.

2. Do not turn the cushion valve the number of rotations shown below or more from its fully closed state.

If it is turned the number of rotations shown below or more, the cushion valve may come off.

Bore size (mm)	Rotations	Hexagon wrench nominal size
20	2	1.5
25	4.5	1.5
32	4.5	1.5
40	5	1.5
50	3	3
63	4.5	3
80	5	4
100	5	4

3. Do not open the cushion valve after rotating it numerous times in a row. Though uncommon, there are cases in which the cushion valve may leak air.

The cushion valve should be adjusted by gradually opening it while checking the operation of the cylinder cushion. In the unlikely event that air leakage occurs, return the cushion needle to the fully-closed state, and readjust the cushion needle to the desired position.

4. Operate within the specified cylinder speed and kinetic energy. Otherwise, cylinder and seal damage may occur.

5. When a cylinder is operated with one end fixed and other free (basic, flange types), a bending moment may act on the cylinder due to the vibration generated at the stroke end, which can damage the cylinder. In such a case, install a mounting bracket to suppress the vibration of the cylinder body or reduce the piston speed so that the cylinder does not vibrate. Also, use a mounting bracket to suppress vibrations when moving the cylinder body or when a cylinder is operated horizontally and fixed at one end at a high speed and frequency.

##### ⚠ Caution

1. Use caution regarding the cushion performance in the low-speed range.

There may be individual performance and effect variances when used near 50 mm/s.

2. Do not apply excessive lateral load to the piston rod.

Easy checking method

Minimum operating pressure after the cylinder is mounted to the equipment (MPa) = Minimum operating pressure of cylinder (MPa) + (Load weight (kg) × 9.8 × Friction coefficient of guide/Sectional area of cylinder (mm<sup>2</sup>))

If smooth operation is confirmed within the above value, the load on the cylinder is the resistance of the thrust only and it can be judged as having no lateral load.

3. Do not use the air cylinder as an air-hydro cylinder.

This may result in oil leak.

4. Install a rod boot without twisting.

If the cylinder is installed with its bellows twisted, it could damage the bellows.

5. Tighten clevis bracket mounting bolts with the following proper tightening torque.

ø20: 1.5 N·m, ø25 to 32: 2.9 N·m, ø40: 4.9 N·m,

ø50: 11.8 N·m, ø63 to 80: 24.5 N·m, ø100: 42.2 N·m

#### Disassembly/Replacement

##### ⚠ Warning

1. Only people who have sufficient knowledge and experience are allowed to replace seals.

The person who disassembles and reassembles the cylinder is responsible for the safety of the product. Repeatedly disassembling and reassembling the product may cause wearing or deformation of the screws as well as a decline in screw tightening strength. When reassembling the product, be sure to check the cover and tubing screws for wear, deformities, or any other abnormalities. Operating the product with damaged screws may result in the cover or tubing coming off during operation, which could lead to a serious accident. Caution must be taken to avoid such incidents.

##### ⚠ Caution

1. Do not replace the bushings.

The bushings are press-fit. To replace them, they must be replaced together with the cover assembly.

2. To replace a seal, apply grease to the new seal before installing it.

If the cylinder is put into operation without applying grease to the seal, it could cause the seal to wear significantly, leading to premature air leakage.

3. Cylinders with ø50 or larger bore sizes cannot be disassembled.

When disassembling cylinders with bore sizes of ø20 through ø40, grip the double flat part of either the tube cover or the rod cover with a vise and loosen the other side with a wrench or a monkey wrench etc., and then remove the cover. When re-tightening, tighten approximately 2 degrees more than the original position. (Cylinders with ø50 or larger bore sizes are tightened with a large tightening torque and cannot be disassembled.)

4. When replacing seals, take care not to hurt your hand or finger on the corners of parts.

### <Precautions on the non-rotating rod type>

#### Handling

##### ⚠ Caution

1. Avoid using the air cylinder in such a way that rotational torque would be applied to the piston rod.

• If rotational torque is applied, the non-rotating guide will become deformed, thus affecting the non-rotating accuracy. Refer to the table below for the approximate values of the allowable range of rotational torque.

Allowable rotational torque (N·m or less)	ø20	ø25, ø32	ø40, ø50, ø63
	0.2	0.25	0.44

• To screw a bracket or a nut onto the piston rod, make sure to retract the piston rod entirely, and place a wrench over the flat portion of the rod that protrudes. Tighten it by giving consideration to prevent the tightening torque from being applied to the non-rotating guide.

### <End Lock Cylinder Precautions>

#### Use the Recommended Pneumatic Circuit

#### ⚠ Caution

- This is necessary for proper operation and release of the lock.

Head end lock

Rod end lock

#### Handling

#### ⚠ Caution

- Do not use 3 position solenoid valves.**  
Avoid use in combination with 3 position solenoid valves (especially closed center metal seal types). If pressure is trapped in the port on the lock mechanism side, the cylinder cannot be locked. Furthermore, even after being locked, the lock may be released after some time, due to air leaking from the solenoid valve and entering the cylinder.
- Back pressure is required when releasing the lock.**  
Be sure air is supplied to the side of the cylinder without a lock mechanism, (side of the piston rod without lock for double end lock), before starting up, as in the above figures. Otherwise, the lock may not be released. (Refer to "Releasing the Lock".)
- Release the lock when mounting or adjusting the cylinder.**  
If mounting or other work is performed when the cylinder is locked, the lock unit may be damaged.
- Operate with a load ratio of 50% or less.**  
If the load ratio exceeds 50%, this may cause problems such as failure of the lock to release, or damage to the lock unit.
- Do not operate multiple cylinders in synchronization.**  
Avoid applications in which two or more cylinders with end lock are synchronized to move one workpiece, as one of the cylinder locks may not be able to release when required.
- Use a speed controller with meter-out control.**  
Lock cannot be released occasionally by meter-in control.
- Be sure to operate completely to the cylinder stroke end on the side with the lock.**  
If the cylinder piston does not reach the end of the stroke, locking and unlocking may not be possible.
- Do not use the air cylinder as an air-hydro cylinder.**  
This may result in oil leak.
- Install a rod boot without twisting.**  
If the cylinder is installed with its bellows twisted, it could damage the bellows.
- Adjust an auto switch position so that it operates for movement to both the stroke end and backlash (2 mm) positions.**  
When a 2-color indicator switch is adjusted for green indication at the stroke end, it may change to red for the backlash return, but this is not abnormal.

#### Handling

#### ⚠ Warning

- Do not operate the cushion valve in the fully closed or fully opened state.**  
Using it in the fully closed state will cause the cushion seal to be damaged. Using it in the fully opened state will cause the piston rod assembly or the cover to be damaged.
- Operate within the specified cylinder speed.**  
Otherwise, cylinder and seal damage may occur.

#### Operating Pressure

#### ⚠ Caution

- Supply air pressure of 0.15 MPa or higher to the port on the lock mechanism side, as it is necessary for releasing the lock.

#### Exhaust Speed

#### ⚠ Caution

- The lock will be engaged automatically if the pressure applied to the port on the lock mechanism side falls to 0.05 MPa or less. In cases where the piping on the lock mechanism side is long and thin, or the speed controller is separated at some distance from the cylinder port, the exhaust speed will be reduced. Take note that some time may be required for the lock to engage. In addition, clogging of a silencer mounted on the solenoid valve exhaust port can produce the same effect.

#### Relation to Cushion

#### ⚠ Caution

- When cushion valve at lock mechanism side is fully opened or closed, piston rod may not be reached at stroke end. Thus, lock is not established. And when locking is done at cushion valve fully closed, adjust cushion valve since lock may not be released.

#### Releasing the Lock

#### ⚠ Warning

- Before releasing the lock, be sure to supply air to the side without a lock mechanism, so that there is no load applied to the lock mechanism when it is released. (Refer to the recommended pneumatic circuits.) If the lock is released when the port on the other side is in an exhaust state, and with a load applied to the lock unit, the lock unit may be subjected to an excessive force and be damaged. Furthermore, sudden movement of the piston rod is very dangerous.

#### Disassembly/Replacement

#### ⚠ Caution

- Do not replace the bushings.**  
The bushings are press-fit. To replace them, they must be replaced together with the cover assembly.
- To replace a seal, apply grease to the new seal before installing it.**  
If the cylinder is put into operation without applying grease to the seal, it could cause the seal to wear significantly, leading to premature air leakage.
- Cylinders with  $\phi 50$  or larger bore sizes cannot be disassembled.**  
When disassembling cylinders with bore sizes of  $\phi 20$  through  $\phi 40$ , grip the double flat part of either the tube cover or the rod cover with a vise and loosen the other side with a wrench or a monkey wrench etc., and then remove the cover. When re-tightening, tighten approximately 2 degrees more than the original position. (Cylinders with  $\phi 50$  or larger bore sizes are tightened with a large tightening torque and cannot be disassembled.)

Be sure to read this before handling the products. Refer to page 20 for safety instructions and pages 21 to 30 for actuator and auto switch precautions.

## Manual Release

### ⚠ Caution

#### 1. Non-locking type manual release

Insert the accessory bolt from the top of the rubber cap (it is not necessary to remove the rubber cap), and after screwing it into the lock piston, pull it to release the lock. If you stop pulling the bolt, the lock will return to an operational state.

Thread sizes, pulling forces and strokes are as shown below.

Bore size (mm)	Thread size	Pulling force	Stroke (mm)
20, 25, 32	M2.5 x 0.45 x 25 L or more	4.9 N	2
40, 50, 63	M3 x 0.5 x 30 L or more	10 N	3
80, 100	M5 x 0.8 x 40 L or more	24.5 N	3

Remove the bolt for normal operation.

It can cause lock malfunction or faulty release.

#### 2. Locking type manual release

While pushing the M/O knob, turn it 90° counterclockwise. The lock is released (and remains in a released state) by aligning the ▲ mark on the cap with the ▼OFF mark on the M/O knob.

When locking is desired, turn the M/O knob 90° clockwise while pushing completely down, and align the ▲ mark on the cap with the ▼ON mark on the M/O knob. The correct position is confirmed by a clicking sound.

Failure to click it into place properly can cause the lock to disengage.

## Working Principle

\* The figures below are the same as those for CBA2 series.

### ● Head end lock (Rod end lock is the same.)

- When the piston rod is getting closer to the stroke end, the taper part (\*) of the piston rod edge will push the lock piston up.

- The lock piston is pushed up further.

- The lock piston is pushed up into the groove of the piston rod to lock it. (The lock piston is pushed up by spring force.) At this time, it is exhausted from the port on the head side and introduced into the atmosphere.

- When pressure is supplied in the head side, lock piston will be pushed up to release the lock.

- When the lock is released, the cylinder will move forward.
