

Sine Cylinder

REC Series

ø20, ø25, ø32, ø40

Allows high speed transfer of work with dramatically reduced shock/impact.

Sine Cylinder *REC Series*

∅20,∅25,∅32,∅40

Allows rapid transfer of work

Motion comparison with the one with shock absorber

Smooth acceleration

Space-saving has been realized by simple circuit

Comparison to Shockless Transfer Systems

Current System				Sine Cylinder
Control method	Speed control by a flow control valve which can variable throttle flow according to indicated current.	Shock absorber	Multistage speed control by combining speed controllers and a directional control valve.	Cushioning keep up with depth of orifice as sine function which change depend on stroke.
System construction	<p>Symbol</p> <p>Current system 1</p>			
Acceleration	Smooth operation	Same start up as standard cylinder due to lack of slow controlled start function.	Smooth speed control cannot be achieved by digital control changes are associated with it.	
Deceleration	Smooth operation	Initial impact is large. (Initial force against shock absorber)	Smooth speed control cannot be achieved by digital control, and sudden speed changes are associated with it.	Smooth operation without sudden speed changes
Construction	Complex	Simple	Complex	Smooth operation without sudden speed changes
				Simple

Compatible with Clean Room ISO Class 4 (ISO14644-1). (Refer to page 133.)

This model conforming to the clean room specification removes dust generated inside with an exhaust from the relief port or vacuum sweeping.

with dramatically reduced shock/impact.

and deceleration (5 m/s^2 or less)

Cushion seal

Cushion ring

The exterior of the cushion ring is provided with a variable throttle groove in its longitudinal direction.

Smooth acceleration/deceleration without having influence from load, speed or pressure fluctuation

Reducing actuation cycle time

Max. 500 mm/s of high speed transfer is possible. Cycle time can be drastically reduced compared with current low speed cylinder (10 to 30 mm/s).

Reference Example) Motion on RECL32-300

Pressure Fluctuation

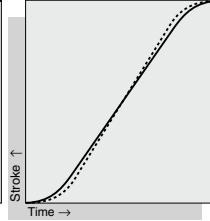

Pressure (MPa)	0.3	0.5
Load (kg)	10	
Speed (mm/s)	300	

— P=0.5 MPa, M=10 kg
 P=0.3 MPa, M=10 kg

Load Fluctuation

Pressure (MPa)	0.5	
Load (kg)	10	30
Speed (mm/s)	300	

— M=10 kg
 M=30 kg

Pressure (MPa)	0.5	
Load (kg)	10	
Speed (mm/s)	100	300

— V=300 mm/s
 V=100 mm/s

⚠ Caution

Use the recommended speed controllers. (Refer to page 143.)

REC Series Model Selection

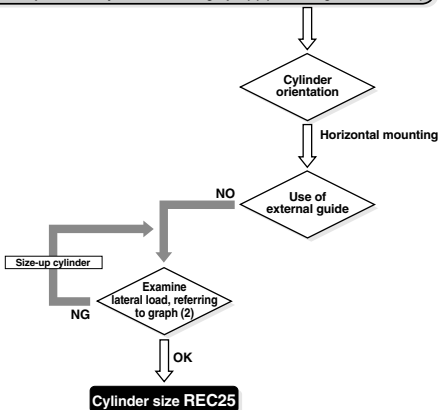

Selection Step

Selection Example 1

Actuating orientation: Horizontal transfer of work (without external guide)
 Load mass: $M = 0.2$ kg (2N)
 Cylinder stroke: 300 mm
 Maximum speed: $v = 200$ mm/s
 Supply pressure: $P = 0.5$ MPa

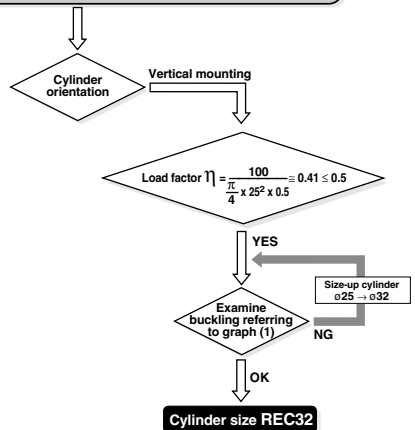

REC20 provisionally selected from graph (1) ($M = 0.2$ kg, $v = 200$ mm/s)

Selection Example 2

Actuating orientation: Vertical transfer of work (Rod side flange)
 Load mass: $M = 10$ kg
 Cylinder stroke: 400 mm
 Maximum speed: $v = 300$ mm/s
 Supply pressure: $P = 0.5$ MPa

REC25 provisionally selected from graph (1) ($M = 10$ kg, $v = 300$ mm/s)

Graph (1) Absorbed Energy Curve

Graph (2) Applicable Max. Stroke Against Lateral Load*

* The above curve in the graph refers to P = 0.5 MPa of supply pressure. If supply pressure is other than P = 0.5 MPa, please figure out a max. stroke, using proportional calculation.

Example) If P = 0.6 MPa, a max. stroke = $\frac{0.6}{0.5}$ = the respective stroke in the graph x 0.5

*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.

A water-resistant type cylinder is recommended for use in an environment which requires water resistance. However, please contact SMC for water-resistant products of ø20 and ø25.

*2 1 m type lead wire is only applicable to D-A93.

* Lead wire length symbols: 0.5 m Nil (Example) M9NW
 1 m M (Example) M9NWM
 3 m L (Example) M9NWL
 5 m Z (Example) M9NwZ
 None N (Example) H7CN

* Solid state auto switches marked with "○" are produced upon receipt of order.

* Since there are other applicable auto switches than listed, refer to page 142 for details.

* For details about auto switches with pre-wired connector, refer to pages 1410 and 1411.

* D-A9□(V)/M9□(V)/M9□W(V), M9□A(V) auto switches are shipped together (not assembled). (Only auto switch mounting brackets are assembled before shipped.)

Standard Specifications

Bore size (mm)	20	25	32	40
Action	Double acting, Single rod			
Fluid	Air			
Proof pressure	1.5 MPa			
Maximum operating pressure	1.0 MPa			
Minimum operating pressure	0.2 MPa			
Ambient and fluid temperature	-10 to 60°C			
Piston speed	50 to 500 mm/s			
Cushion	Air cushion (End rubber bumper)			
Effective cushioning stroke (mm)	45	45	50	60
Lubrication	Not required (Non-lube)			
Stroke length tolerance	Up to 1000 st: $^{+1.4}_0$, 1001 to 1500 st: $^{+1.8}_0$			

Symbol
Air cushion

Standard Stroke

Bore size (mm)	Minimum stroke (1) (Recommended)	Standard stroke (2) (mm)	Maximum manufacturable stroke (mm)
20	150	Up to 700	1500
25	150	Up to 700	
32	150	Up to 1000	
40	200	Up to 1000	

Note 1) The recommended minimum strokes or shorter lengths are available. However, since the effective cushion stroke is longer, the cushion performance may differ from the standard specifications.

Note 2) When exceeding the standard strokes, it will be out of warranty.

Weight

Bore size (mm)		20	25	32	40
Basic Weight	Basic type	0.32	0.47	0.74	1.25
	Axial foot type	0.47	0.63	0.90	1.52
	Flange type	0.38	0.56	0.83	1.37
	Single clevis type	0.36	0.51	0.78	1.34
	Double clevis type	0.37	0.53	0.79	1.38
	Trunnion type	0.36	0.54	0.81	1.35
Additional weight per each 50 mm of stroke		0.05	0.07	0.09	0.13
Mounting bracket	Pivot bracket for clevis (With pin)	0.07	0.07	0.14	0.14
	Single knuckle joint	0.06	0.06	0.06	0.23
	Double knuckle joint (With pin)	0.07	0.07	0.07	0.20

* Calculation: (Example) **RECL32-200**
 Basic weight 0.90 (Foot type ø32)
 Additional weight 0.09/50 st
 Cylinder stroke 200 (st)
 $0.90 + 0.09 \times 200/50 = 1.26 \text{ kg}$

Accessory (Option)

Refer to pages 137 and 138 for part numbers and dimensions of the single knuckle joint, double knuckle joint, clevis pin, and knuckle pin.

Mounting Bracket Part No.

Mounting bracket	Minimum order	Bore size (mm)				Description (when ordering a minimum number)
		20	25	32	40	
Axial foot *	2	CM-L020B	CM-L032B	CM-L040B		Foot 2 pcs., Mounting nut 1 pc.
Flange	1	CM-F020B	CM-F032B	CM-F040B		Flange 1 pc.
Single clevis**	1	CM-C020B	CM-C032B	CM-C040B		Single clevis 1 pc., Liner 3 pcs.
Double clevis (With pin)***	1	CM-D020B	CM-D032B	CM-D040B		Double clevis 1 pc., Liner 3 pcs., Clevis pin 1 pc., Retaining ring 2 pcs.
Trunnion (With nut)	1	CM-T020B	CM-T032B	CM-T040B		Trunnion 1 pc., Trunnion nut 1 pc.

* When ordering foot bracket, order 2 pieces per cylinder.

** 3 liners are included in the clevis bracket for adjusting an angle when mounting it.

*** Clevis pin and retaining ring (cotter pin for ø40) are packaged together.

Replacement Parts/Seal Kit

Bore size (mm)	Kit no.	Contents
20	REC20-PS	Set of nos. above (15, 17, 19, 20, 21, 23)
25	REC25-PS	
32	REC32-PS	
40	REC40-PS	

* Seal kit includes a grease pack (10 g).

Order with the following part number when only the grease pack is needed.

Grease pack part no.: GR-S-010 (10 g)

⚠ Caution

When disassembling cylinders with bore sizes of $\phi 20$ to $\phi 40$, grip the double flat part of either the tube cover or the rod cover with a vise and loosen the other side with a wrench or an adjustable angle wrench, and then remove the cover. When re-tightening, tighten approximately 2 degrees more than the original position.

Working Principle

1. Start-up

Actuating air passes from cylinder port on head side and enters the right hand side of chamber of the cylinder from space between cushion seal and U-shaped groove on the outer surface of cushion spear. Air in the left hand side of chamber of the cylinder passes through space between cushion seal and piston rod, and is released to the cylinder port on rod side.

2. In-rush/acceleration

Differential pressure (theoretical force) generated on the left and right sides of piston becomes larger than starting resistance, and piston starts to actuate. With the actuation, U-shaped groove on the cushion spear outer surface gradually becomes deeper, air flow necessary for piston enters the right hand side of chamber of the cylinder, and piston accelerates. This acceleration process can be achieved smoothly (as a sine function) by using a cushion spear on which a U-shaped groove is machined.

3. Acceleration

When piston starts to actuate, air can go in and out freely because cushion spear on head side is released from cushion seal. With this actuation, piston speed accelerates (or maintains the same speed).

4. Deceleration

When cushion spear on rod side meets cushion seal, air in cushion chamber on rod side flows through space between cushion spear groove and cushion seal.

Since the space is reduced as a sine function, the cylinder rod decelerates smoothly.

5. Stop

The piston stops at the stroke end on rod side with smooth cushioning. Air flow which is switched by solenoid valve is reversed from the one indicated in the above "1. Start-up".

6. Reset

Actuating air passes from cylinder port on rod side and enters the left chamber of the cylinder from space between cushion seal and U-shaped groove on the outer surface of cushion spear. Also, air in right hand side of chamber of piston is exhausted from cylinder port. As U-shaped groove on the cushion spear outer surface gradually becomes deeper, the cylinder accelerates.

Clean Series

10 — REC **Mounting type** **Bore size** — **Stroke**

Clean Series

10	Relief type
11	Vacuum type

The type which is applicable for using inside the clean room graded ISO Class 4 by making an actuator's rod section a double seal construction and discharging by relief port directly to the outside of clean room.
The plug (M5 x 0.8) in the standard dimensions becomes a relief port.

For detailed specifications about the clean series, refer to the **Web Catalog**.

Specifications

Action	Double acting, Single rod
Bore size	ø20, ø25, ø32, ø40
Maximum operating pressure	1.0 MPa
Minimum operating pressure	0.2 MPa
Cushion	Air cushion
Relief port size	M5 x 0.8
Piston speed	50 to 400 mm/s
Mounting	Basic type, Axial foot type, Rod side flange type, Head side flange type

* Auto switch can be mounted.

Note 1) Since the switch bracket (made from nylon) are affected in an environment where alcohol, chloroform, methylamines, hydrochloric acid or sulfuric acid is splashed over, so it cannot be used. Please consult SMC regarding other chemicals.

Note 2) When mounting a D-M9□A(V) type auto switch, if the switch bracket is mounted on the indicator light, it may damage the auto switch. Therefore, be sure to avoid mounting the switch bracket on the indicator light.

[Mounting screw set made of stainless steel]

The following set of mounting screws made of stainless steel is available. Use it in accordance with the operating environment. (Please order the auto switch mounting bracket separately, since it is not included.)

BBA4: For D-C7/C8/H7

Note) Refer to page 1440 for details of the BBA4. The above stainless steel screws are used when a cylinder is shipped with the D-H7BA auto switch. When only an auto switch is shipped independently, the BBA4 is attached.

* Band (c) is mounted so that the projected part is on the internal side (contact side with the tube).

Other than the applicable auto switches listed in "How to Order", the following auto switches can be mounted.

For detailed specifications, refer to pages 1341 to 1435.

Auto switch type	Model	Electrical entry (Fetching direction)	Features	Applicable bore size
Reed	D-C73, C76	Grommet (In-line)	—	φ20 to φ40
	D-C80		Without indicator light	
	D-B53		—	
Solid state	D-H7A1, H7A2, H7B		—	φ20 to φ40
	D-H7NW, H7PW, H7BW		—	
	D-G5NT		Diagnostic indication (2-color indicator)	φ20 to φ40
		With timer		

* For solid state auto switches, auto switches with a pre-wired connector are also available. Refer to pages 1410 and 1411 for details.

* Normally closed (NC = b contact) solid state auto switches (D-M9□E(V)) are also available. Refer to page 1360 for details.

REC Series Specific Product Precautions

Be sure to read this before handling the products.

Refer to page 9 for safety instructions and pages 10 to 19 for actuator and auto switch precautions.

⚠ Caution

1. Speed Adjustment

Throttle speed controller, such as AS series, is recommended for speed adjustment.

Recommended Speed Controller with One-touch Fitting

Model	Model		
	Elbow type	Universal type	In-line type
REC20	AS2201F-01-06A-X214	AS2301F-01-06A-X214	AS2002F-06A-X214
REC25	AS2201F-01-06A-X214	AS2301F-01-06A-X214	AS2002F-06A-X214

REC40	AS3201F-02-08A-X214	AS3301F-02-08A-X214	AS3002F-08A-X214

Symbol: Throttle valve

- Speed control is possible with meter-in and meter-out types of speed controllers. However, smooth acceleration and deceleration may not be obtained by these speed controllers.
- For installation other than horizontal mounting, it is recommended to use a system with reduced pressure supply circuit on the downward side. (This system is also effective for avoiding a start delay at rise and air consumption.)

2. Cushion Adjustment

Cushion adjustment mechanism is not designed.

Cushion adjustment is not necessary because the model can perform smooth acceleration and deceleration in a wide range of strokes without an adjusting cushion.

3. Plug (Relief Port)

For general conditions, a plug (M5 x 0.8) on the rod cover side is plugged with a hexagon socket head set screw . Do not remove it since dust may enter inside.

Hexagon socket set screw is not prepared for clean room specifications, and use it as relief port accordingly.

4. Cycle Time

Due to the nature of its construction, this cylinder starts and stops gradually. Therefore, the length of time for the stroke could be longer than that of standard cylinders.
