

Heavy Duty Stopper Cylinder

RSH Series

ø20, ø32

To stop pallets gently Stopper cylinder with built-in shock absorber

Amount of energy absorption can be adjusted to suit the load.

Stops the workpiece gently with built-in shock absorber.

The retardation value can be changed by rotating the adjustment dial.

Easy replacement of shock absorbers

The shock absorber can be removed by just detaching the stopper and adjustment dial. This ensures easy maintenance.

Series Variations

Series	Bore size (mm)	Standard stroke (mm)		Mounting type	Actuation system	Rod end shape	Standard variations				Options		
		15	20				Built-in magnet	With lock mechanism	With cancel	With proximity sensor			
RSH	20	●		Flange	Double acting	Lever Adjustable	●	●	●	●			
	32		●		Double acting spring type		●	●	●	●			
					Single acting retraction type								

The roller lever direction can be changed in 90° steps.

The roller lever of the stopper can be rotated 360° in 90° increments for $\phi 32$ (180° for $\phi 20$) to adapt it to the direction of the workpiece.

Side piping (flange) is possible.

Options

The lever lock mechanism prevents even lightweight pallets from rebounding off the shock absorber's spring.

The cancel cap holds the lever horizontally allowing a pallet to pass.

When the lever stands erect (when the energy is absorbed), the switch turns on a signal that determines the pallet has reached the stop position. (For more information, please refer to page 663.)

● **High power rod**

Bore size (mm)	20	32
Rod size (mm)	14	20

● **3 types of operation**

1. Single acting
2. Double acting
3. With double acting spring

● **Auto switch mounting available**

Auto switches can be mounted without protruding from the body surface.

● **2 types of roller materials**

are available depending on the application. (Resin, Carbon steel)

RSH Series Model Selection

Operating Range

(Example) Weight of transferred object 10 kg, Transfer speed 10 m/min, Friction coefficient $\mu = 0.1$

(How to read graph)

In graph [2], find the intersection of the vertical axis representing the weight of transferred object of 10 kg and the horizontal axis representing the transfer speed of 10 m/min. And select the bore size $\phi 20$ positioned within the operating range of the cylinder.

Graph ①

$\mu = 0$

Graph ②

$\mu = 0.1$

* The graphs for the load mass and transfer speed show the values measured at room temperature (20 to 25°C).

Lateral Load and Operating Pressure

The greater lateral load needs higher cylinder operating pressure. Set the operating pressure by using the graph as a guideline.

48	Cancel cap	Aluminum alloy	Clear anodized
49	O-ring	NBR	

Replacement Parts/ Seal Kit

Bore size (mm)	Kit no.		Contents
	Double acting	Single acting	
20	RSH20D-PS	RSH20T-PS	Set of items 33 to 37 in above table (excluding 34)
32	RSH32D-PS	RSH32T-PS	

Replacement Parts/ Shock Absorber

Bore size (mm)	Order no.
20	RSH-R20
32	RSH-R32

*Seal kit includes 33 to 37 (excluding 34). Order the seal kit based on each bore size.

*Since the seal kit does not include a grease pack, order it separately.

Grease pack part no.: GR-S-010 (10 g)

RSH Series

Dimensions/Bore size: $\varnothing 20$

RSH20-15□□

*The figure shows an extended piston rod.

Note 1) The figure shows dimensions at the maximum energy absorption capacity.

Note 2) Dimensions with auto switch are identical to the above.

Note 3) The figure shows an extended piston rod.

Note 4) The dimensions marked with "*" vary according to adjustment of the shock absorber dial.

Note 5) Circumscriber circle $\varnothing 47$ means that diameter of the circle circumscribed to the cylinder angles. Mounting hole diameter must be $\varnothing 48$. Be careful of the interference between the lever and the mounting base when mounted from the lever side. Thus, the thickness of the mounting base must be 8 mm or less.

Note 6) It is recommended to set the conveyor height in a range from the lower limit position to the upper limit position of the conveyor (dimension *3 shown in the figure).

Note 7) The dimensions in the figure do not include the stroke length tolerance (0 to +1.4 mm). When fixing the cylinder (setting the conveyor position), take this into consideration, and be sure to set the cylinder within the range of Note 6) using the upper limit position of the conveyor (roller center position) as a reference.

Dimensions/Bore size: $\varnothing 32$

RSH32-20□□

*The figure shows an extended piston rod.

Note 1) The figure shows dimensions at the maximum energy absorption capacity.

Note 2) Dimensions with auto switch are identical to the above.

Note 3) The figure shows an extended piston rod.

Note 4) The dimensions marked with "*" vary according to adjustment of the shock absorber dial.

Note 5) Circumscribed circle $\varnothing 62$ means that diameter of the circle circumscribed to the cylinder angles. Mounting hole diameter must be $\varnothing 63$. Be careful of the interference between the lever and the mounting base when mounted from the lever side. Thus, the thickness of the mounting base must be 9 mm or less.

Note 6) It is recommended to set the conveyor height in a range from the lower limit position to the upper limit position of the conveyor (dimension *3 shown in the figure).

Note 7) The dimensions in the figure do not include the stroke length tolerance (0 to +1.4 mm). When fixing the cylinder (setting the conveyor position), take this into consideration, and be sure to set the cylinder within the range of Note 6) using the upper limit position of the conveyor (roller center position) as a reference.

D-M9□(V)/M9□W(V)/M9□A(V)

Besides the models listed in How to Order, the following auto switches are applicable. Refer to pages 1341 to 1435 for detailed specifications.

Auto switch type	Model	Electrical entry	Features
Solid state	D-Y69A, Y69B, Y7PV	Grommet (Parpendicular)	-
	D-Y7NWV, Y7PWV, Y7BWV		Diagnostic indication (2-color display)
	D-Y59A, Y59B, Y7P	Grommet (In-line)	-
	D-Y7NW, Y7PW, Y7BW		Diagnostic indication (2-color display)
	D-Y7BA		Water resistance (2-color display)

*For solid state auto switches, auto switches with a pre-wired connector are also available. Refer to pages 1410 and 1411 for details.

*Normally closed (NC = b contact) solid state auto switches (D-M9□E(V)/Y7G/Y7H) are also available. Refer to pages 1360 and 1362 for details.

RSH Series

Specific Product Precautions

Be sure to read this before handling the products.

Refer to page 9 for safety instructions and pages 10 to 19 for actuator and auto switch precautions.

Instructions

⚠ Caution

1. Shock absorber capacity variable adjustment method

To stop the workpiece gently, loosen the set screw (M4) on the stopper and turn the adjustment dial in response to the energy value of the workpiece so as to select an optimal absorbing position (resistive force value). Turning the adjustment dial clockwise will decrease the resistive force value while turning the adjustment dial counterclockwise will increase the resistive force value. After the dial has been adjusted correctly, tighten the set screw firmly to secure the adjustment dial.

• Set screw (M4) tightening torque: 1.5 N·m

Note 1) Cautions for adjustment When adjusting the shock absorber resistive force value, first try the maximum value and then proceed to smaller values. If the energy value of the transferred workpiece is larger than the resistive force value of the shock absorber, an excessive load will be applied to the lever and may cause damage.

Note 2) As the adjustment dial is turned, the stroke of the shock absorber is variably changed (4 st to 6 st) and the resistive force value of the shock absorber can be changed. As the stroke is changed, the lever angle is also changed.

2. How to change the positional relationship between the transfer and piping directions

The positional relationship between the transfer and piping directions can be changed in 90° increments (or 180° increments in case of ø20).

Insert a flat blade screwdriver into the notch at the guide rod end to loosen the guide rod. The lever is then turned freely. For ø32 type, the lever can be changed in 90° steps. For ø20 type, the lever can be reversed 180°.

• Guide rod tightening torque

ø20: 1.5N·m

ø32: 3.0N·m

3. How to replace shock absorber during maintenance

Loosen the hexagon socket head cap screw on the stopper and the set screw (M4) that secures the shock absorber, and then remove the stopper from the lever holder. Incline the lever 90° and pull out the shock absorber after the adjustment dial has been removed.

*Cautions for assembly

After replacing the shock absorber, tighten the bolts and fixing screw firmly and apply grease to the shock absorber rod end surface.

• Tightening torque

Set screws (M4): Common to all sizes 1.5 N·m
Hexagon socket head cap screws (M4): Common to all sizes 1.5 N·m

Selection

⚠ Danger

1. Use the equipment only within the specified operating range. If the condition exceeds the specified operating range, it will cause excessive impact or vibration to the stopper cylinder, leading to possible damages.

⚠ Caution

1. Do not collide the pallet while the lever is standing erect. In case of a lever with built-in shock absorber type, do not collide the next pallet while the lever is standing erect. Otherwise, all energy will be applied to the cylinder body.
2. When a load directly connected to the cylinder is stopped at an intermediate position: Apply the operating range in the catalog only in these cases where the stopper cylinder is used to stop pallets on a conveyor belt.

Mounting

⚠ Caution

1. Do not apply rotational torque to the cylinder rod. Align the cylinder parallel to the working face of the pallet working when installing in order to prevent rotational torque working on the cylinder rod.
2. Do not scratch or gouge the sliding part of the piston rod or guide rod. Scratches and gouges may damage the packing, causing air leakage or malfunction.
3. If the conveyor setting position is incorrect, the pallets or other items being conveyed may touch the lever (protrusion on the side of the shock absorber). When installing the cylinder, be very careful of the contents of Note 7) indicated in the dimensions.

Operation

⚠ Caution

1. In case of cylinders with locking mechanism, do not apply an external force from the opposite side when the lever is locked. Lower the cylinder before adjusting the conveyor or moving the pallet.
2. In case of cylinders with locking mechanism, do not collide the pallet and roller when the lever is locked. If the pallet collides with the roller in the locked state, it may cause lever malfunction. (The lever is released when the cylinder is fully retracted.)
3. Some structural backlash is present in the lever lock mechanism. As the stopping position of the pallet can be affected by the weight of the object being transferred, the operating conditions of the conveyor, etc., the stopping position may vary.
4. Do not let your hand become caught when operating the cylinder. The lever holder goes up and down while the cylinder is in operation. Pay sufficient attention not to let your hand or fingers become caught between the rod cover and lever holder.
5. Do not let water, cutting oil or dust splash on the equipment. It can cause oil leakage and malfunction of the shock absorber.
6. The stop state of the workpiece may vary depending on changes in ambient temperature or secular changes in shock absorber resistive force. Check the stop state periodically and adjust the shock absorber resistive force at appropriate intervals.
